Spiral Study 3: On A Curved Tempo

Andrew Byrne

In the third study, the accerlating and decelerating spirals are rearranged as repeating notes. A new spiral enters every 2 bars. In this setting, the polyrhythmic relationship between the spirals can be heard - the second spiral is a 2:1 polyrhythm to original, the third creates a 3:2:1 polyrhythms, the fourth 4:3:2:1. There are 24 spirals in the study. These polyrhythmic relationships are overlaid with the state of exponential slowing down which is typical of all the spirals. All are slowing down while maintaining a fixed polyrhythmic relationship with the others. In effect, the first spiral is heard as articluting downbeats, suggesting a sense of a curved tempo as the texture expanding to include 24 spirals.
